

Please replace the paragraph beginning at page 7, line 15 with the following rewritten paragraph:

B2 ¶ The film assembly may comprise a first film container having a spool therein to which an end of the film is attached, and a second spoolless light tight film container within which the film is wound having a removable end cap, the film being wound in a coil in the second film container and extending to the first container. ¶

Please replace the paragraph beginning at page 7, line 23 and continuing to page 8, with the following rewritten paragraph:

B3 ¶ The photographic film-receiving container has a housing comprising a pair of shell halves which together define a film slot through which, in use, film may extend. The container may have a housing which further defines an aperture for insertion of a film winding tool. Each shell half may be provided with an edge region which faces the edge region of the other shell half defining the film slot therebetween, each edge region being provided with a strip of soft fabric or fabric-like material thereon. There may be securing means providing a snap-fit connection between the shell halves. ¶

Please replace the paragraph beginning at page 10, line 1 with the following rewritten paragraph:

B4 ¶ The film assembly may comprise a first film container having a spool therein to which an end of the film is attached and about which the film may be wound, and a second spoolless light tight film container within which the film may be wound having a removable
